

Philip Forsey

15+ years of experience aligning machine learning research with corporate strategy to achieve measurable results. Demonstrated ability to develop collaborative, cross-functional partnerships to effectively translate business goals into clearly defined analytical objectives. Experience leading teams through the full analytics lifecycle, from defining complex problems to developing and delivering practical machine learning solutions. Proven ability to synthesize complex analytical results and communicate their implications clearly across all levels of the organization.

EXPERIENCE

AT&T Mobility & Entertainment

May 2019 – present · Bothell, WA

Strategic Pricing Manager, Advanced Analytics

Scope: Own the product revenue forecasts used to define strategic goals. Partner with product owners to develop, validate and implement initiatives that accelerate revenue growth, cash flow, and market penetration across the company's product portfolio.

- **Sized a \$100M international roaming opportunity (+10% growth)** with a predictive segmentation model that isolated high-value, price-insensitive segments; the case carried a selective 20% rate increase with targeted retention, and the target was met within 10 months.
- **Surfaced \$65M in hidden annual revenue loss across 300K+ customers**, traced to confusing roaming opt-in messaging and churn masked by rising travel volume; drove automatic fixed-rate enrollment as the fix.
- **Built the bundling case for 125,000 incremental wireless additions a year** and 35% lower churn, modeling discount elasticity to set optimal incentives for customers in fiber-available areas.
- **Reduced model rebuild time 50%** by automating the machine learning pipeline with agentic AI, moving retraining, validation and reporting to a supervised agent workflow.
- **Advised the product owner against a rate plan launch projected to lose \$40-60M in its first six months**, showing that cannibalization of existing customers exceeded new acquisition value.

T-Mobile

Nov 2017 – May 2019 · Bellevue, WA

Sr Manager, Reporting & Analytics

Scope: Rebuilt the analytics team and its data infrastructure, upskilling the team and transforming its capabilities from traditional reporting to data science. Partnered with business leaders to deliver analysis giving deeper insight into customer experience and operations, driving growth and profitability.

- **Directed strategic initiatives planning and performance management** leading a team of seven (2 data scientists, 3 financial analysts, 2 database developers) for the analytics team, using behavioral modeling to improve operational efficiency and the customer journey.
- **Owned forecasting and budget for \$325M in payments processing**, including data acquisition, development and quality assurance; consolidated 120+ automated ETL processes, reducing their number 30% by eliminating redundant and overlapping data feeds.
- **Designed and built the analytics database that surfaced a \$150K daily charge-back variance**, establishing the single source for reporting and forecasting plus the executive and operational dashboards behind growth and profitability decisions; anomaly detection caught a variance never previously tracked.

LexisNexis Risk Solutions

Strategic Management Consultant

Jan 2016 – Nov 2017 · Los Angeles, CA

Scope: Led strategic advisory initiatives and delivered data-driven solutions built on non-traditional data. Partnered with business leaders and cross-functional stakeholders, aligning machine learning research with corporate strategy to achieve measurable business results.

- **Raised approvals 5–15% while cutting bad debt 10–20%** with consumer and commercial credit risk models inside an automated assessment platform for national wireless carriers, scoring thin-file and no-file applicants on alternative data.
- **Cut call center volume up to 80% for new-customer onboarding** by automating online identity verification that previously required an agent, using non-traditional data for wireless, banking and credit card clients; match rates up 10–20% for clients already running an automated process.
- **Reduced fraudulent transactions 15–30%** with detection models in client decisioning workflows across wireless, banking and credit card, tuning false-positive thresholds against the amount at risk so review cost never exceeded exposure; manual review down 20–40%.
- **Increased lifetime value per acquired customer 10–25%** with propensity models for banking, credit card and online retail campaigns, scored on projected lifetime value instead of response rate alone; response rates up 15–30%, cost per acquisition down 10–25%.
- **Increased collections recovery 20–30% over 12 months** with a risk scoring model used to segment accounts; built to negotiate better rates on easy-to-collect accounts, it revealed that some third-party agencies were far stronger on high-risk accounts, so segmentation became a performance-based allocation strategy.

EDUCATION

MS Analytics · Computational Data Analysis

Georgia Institute of Technology

MBA Finance & New Venture Management

University of Nevada, Las Vegas

BS Business Economics

University of Idaho

PROFESSIONAL CERTIFICATES

Johns Hopkins University

Executive Data Science · Data Science

Cornell University

Machine Learning · Data Science

TECHNICAL SKILLS

Methods	Machine Learning · Time Series Forecasting · A/B & Multivariate Testing · Constraint-Based Optimization · Monte Carlo Simulation · Scenario & Sensitivity Analysis · Budget & Cashflow Modeling · Financial Statement Analysis
Data & Platforms	Python · R · SQL · Databricks · Snowflake · Teradata · Palantir · AWS · Azure
ML & Modeling	scikit-learn · XGBoost · LightGBM · PyTorch · statsmodels
AI & Agentic	LangChain · LangGraph · Retrieval-Augmented Generation · Agentic Workflow Design
Reporting	Power BI · Tableau · Excel + VBA
